

The Mining System

ASSOCIATE CERTIFICATE

As a site leader, the ability to understand, apply and influence the development of the management operating system (MOS) is critical for the execution, monitoring, and management of business performance of a site's operations.

With a focus on practical skills that can be applied directly to your work, this 5-week associate certificate is designed to give you the expertise and insights to drive key decisions that ultimately impact the mine value chain and life of mine plan.

This includes enhancing and leveraging operational reports and cost estimations, translating strategic plans into implementation plans, and generating practical plans for applying your learnings to your own site.

PD hours

20 hours

Delivery

100% online

Duration

5 weeks

Learn how to understand, influence and drive your site's management operating system (MOS) as a key deliverable in translating corporate strategy into site implementation priorities.

- Describe how MOS can be used in the successful operation of a mine.
- Examine the Life of Mine Plan, its processes and discuss some of the key principles and decisions made during this development.
- Explore what an effective operations reporting system is and techniques to maximise its value on site.
- Examine mine accounting, its principles and methods and how it can be used to improve site performance.
