# LIFE-OF-MINE 2018 CONTENTS

## Incorporating societal and community factors into design and operation
- Iron ore mining in proximity to a significant Aboriginal heritage rock shelter, Pilbara Region, Western Australia
  - B G Bow and J J Jiang
- Ethical planning for a sustainable future in Kazakhstan Mining
  - C Catania
- Listening to local voices – a systematic approach for understanding what a social licence to operate means for Rio Tinto in the Pilbara
  - K Moffat, L Dawson, S Carr-Cornish, N Boughen and S Masterson

## Influences of global trends on the future of the industry
- Assessment of climate risk in the Australian mining industry
  - M Allen
- Balancing the benefits and impacts of future copper demand – climate change and arsenic
  - G D Corder and P J Bangerter
- Adaptive management in deep sea mining – looking like you know what you’re doing when it’s never been done before…
  - R L Grogan

## Innovation for delivering better sustainability outcomes
- Wetting and drying cycles as a means to determine the effect and consequences of tailings ageing
  - R Akesseh, M Shaygan, B Usher, M Edraki and T Baumgartl
- Assessment of approaches, data requirements and methodologies for estimating long-term pit lake water levels
  - H J J Boshoff
- Mine closure bonds (financial assurances) – the ‘how much?’ conundrum
  - A Bowden and G Byrne
- Sustainable production from rehabilitated coal mine pastures in southern Queensland’s Brigalow Region – Acland grazing trial results
  - J F Clewett, T Newsome, C Paton, J Bennett, A Melland, J Eberhard and C Baillie
- Is your mine closure a sustainability failure? Transform your asset and create a self supporting neighbouring community. It’s as easy as ABCD!
  - K Cochrane
- Olympic Dam mine closure planning process
  - D Grant, M Tyler and G Hill
- Permitting in the face of uncertainty – how to deliver confidence to regulators and investors
  - R L Grogan
- A framework for assessing and communicating water risks in prospective mining regions of Colombia
  - N McIntyre, M Angarita, N Acosta, L Camacho, J Pearse, C Huguet, O Restrepo, J Ossa-Moreno and D Arbelaez-Ruiz
Sensitivity of a hydro-economic model in a mining region to changes in hydrological and economic inputs
J Ossa-Moreno, N McIntyre, J Smart and D Rivera

Extending mine life through application of an *in situ* recovery approach
D J Robinson and L L Kuhar

Sustainable post-closure development – is it achievable?
P Scholtz

Arsenic pathways in copper mining – sustainability issues and potential solutions
M Tayebi-Khorami, M Edraki, E Manlapig, E Forbes and D Bradshaw

Valid spontaneous combustion hazard assessment for surface mine environmental impact statements
J Theiler and B Beamish

Risk management for minesite closure planning and execution – start now! Lessons from the closure of the Leigh Creek Coalfield, South Australia
B Williams and A Querzoli

**Integrating mine planning and processing for environmental performance**

Diversion decision making with an integrated approach to design for operations and mine closure
S Atkinson, A Markham and M Rafty

Practical waste rock management at the Roy Hill iron ore mine, Western Australia
V de San Miguel, B Miles and J Pearce

Martabe integrated life-of-mine optimisation
K J Grohs

Evaluation of sustainability of copper production value chain from ore to metal using advanced simulation
S Horn, A Remes, T Kotiranta, M Talikka and A Dennis

The golden thread of waste characterisation from exploration drilling to waste rock placement
R Marton, R Wright, M Lowry and M Bettison

Case studies for integrating rehabilitation planning with mine planning in strip mining
I Neilsen, A Walker and A Hooper

Utilising mine planning to deliver closure landforms through productive movement
N Taylor, R Wright and M Bettison

**Strategies and planning for improving rehabilitation outcomes**

Conclusions from long-term cover system performance monitoring – a case study
R Barritt

A process-based approach to mine rehabilitation decision making using Bayesian modelling and risk-based principles for dispersive spoil rehabilitation
G Dale, K Reardon-Smith, E Thomas, J Bennett, L McCallum and S Raine

Planning for (not so) final land use
J Durbin

Planning revegetation for relinquishment
S D Fox and P B Swart

A risk-based approach to drainage design standard selection for mine rehabilitation and relinquishment
C Gimber and A Densten
Geomorphic design and landscape evolution modelling for best practice mine rehabilitation
G R Hancock and J F Martin Duque

Quantifying the effect of climate and surface materials on post-mining landscape erosion – a risk approach using landscape evolution models
G R Hancock, D C Verdon-Kidd, T J Coulthard, J B C Lowry and M J Saynor

Landscape regeneration lessons learned from Mulloon Creek
P Hazell, C Wilson and C Hall

A decision framework for comparison of coal void rehabilitation options
S Henderson and A Hocking

Water treatment in perpetuity – or not?
R J Higgins and M Edraki

Using an undisturbed landform to calibrate long-term predictions of the evolution of a rehabilitated landform
J B C Lowry, M Narayan, K G Evans, M J Saynor and G R Hancock

Mount Isa Mines Rehabilitation Materials Sampling and Analysis program for closure planning
K Mandaran, J Jones, C Nucifora, G Maddocks, M Landers, A Forbes, W Wilson and S Newman

Measuring the recovery of coal mine rehabilitation following fire in Queensland using remote sensing and ground surveys
P McKenna, P D Erskine, S Phinn, V Glenn and D Doley

Contour banks in spoil rehabilitation – a matter of timing
J L Merritt

The impact of rip lines on erosion at the Ranger Mine Site
M J Saynor and J B C Lowry

Are our closure planning and regulatory processes adequate to identify, quantify and appropriately transfer residual risks after successful mine rehabilitation?
P B Swart and P D Erskine
