

MINE VENT 2017 CONTENTS

Keynote papers

The complete renewal of Great Britain's mining laws for the 21st century <i>J R Leeming</i>	3
Regulator's perspective on gas and ventilation management <i>L Shearer</i>	9
Mine dust monitoring past and present <i>J C Volkwein</i>	11

Case studies

Optimal goaf hole spacing in high production gassy Australian longwall mines – operational experiences <i>B Belle</i>	15
Auxiliary ventilation design – why and how mines waste so much power on inferior systems <i>D J Brake</i>	27
Using liquid nitrogen for the inertisation of goafs <i>D Caley</i>	35
An overview of ventilation and gas management systems in an underground coalmine in Iran <i>F Hasheminasab, S M Aminossadati and R Bagherpour</i>	41
Determining ventilation system model inputs from field test work in the oil shale mine <i>S Sabanov</i>	47
Case study – an analysis of reliability and efficiency: ultrasonic versus annubar technologies <i>M J Shearer</i>	51
Emergency egress pathway prediction using ventilation models <i>C M Stewart, S M Aminossadati and M S Kizil</i>	57

Coal seam gas, including gas drainage/storage and utilisation

Gas reservoir and emission modelling to evaluate gas drainage to control tailgate gas concentration and fugitive emissions <i>D J Black</i>	65
Coal seam gas predrainage optimisation through an enhanced knowledge of coal seam permeability <i>M Blanch</i>	73
Gaseous products of weathered coal during the process of spontaneous combustion <i>J Deng, J Song, J Zhao, Y Zhang, X Yi and Y Zhang</i>	79

Coal workers' pneumoconiosis and respirable dust monitoring

Products of reactive pyrite oxidation in the mine environment – implications for coal workers' pneumoconiosis <i>B B Beamish, C R Ward and D Chalmers</i>	87
--	----

Pairwise evaluation of PDM3700 and traditional gravimetric sampler for personal dust exposure assessment **93**
B Belle

Study on coal wettability for dust suppression in the presence of surfactants by sink test **105**
Y Chen, G Xu, R Wang and B Albijanic

Detection and control of spontaneous combustion, and diesel emissions control and measurement

Recognising the deficiencies of current spontaneous combustion propensity index parameters **113**
B B Beamish and J Theiler

Wall-flow type diesel particulate filter system to replace existing wet element filter systems used in typical LHDs in underground coal operations **119**
N Coplin

Tube bundle integrity testing methodologies **129**
L Forrester

The effect of high geo-temperature environment on spontaneous combustion – an experimental study **137**
C Lei, J Deng, Y Xiao, C Shu, K Wang and W Wang

Application of an environmental ‘black carbon’ particulate sensor for continuous measurement of DPM in three underground mines **143**
J C Volkwein, C Barrett, E Sarver and A D A Hansen

Health and safety hazard management

Application of side venting technique in mitigation of methane – air explosion and flame deflagration in ventilation air methane **153**
M Ajrash, J Zanganeh and B Moghtaderi

Delivering a healthy atmosphere underground in a cost-conscious environment **159**
J Black and D Reid

Diesel to electric – creating a positive paradigm in underground ventilation and cooling **169**
W Harris, S Arsenaault, C McGuire, B Rogers and D Witow

Incorporating research data in addressing methane and coal dust fire, and explosion hazards in coalmines **175**
S Kundu, J Zanganeh, D Eschebach and B Moghtaderi

Computational simulation of gas explosion and its propagation in single entry gateroad **181**
A Liu and T Ren

New generation of gas sensors for underground coal mining applications **189**
B M Masum, S M Aminossadati, C R Leonardi, M S Kizil and M Amanzadeh

Introducing a new age of highly effective automatic explosion suppression barriers **197**
A Spaeth, B Belle and H Phillips

Findings from preliminary testing to determine alternative sources of ethylene within sealed areas of underground coalmines **203**
E Westthorp and J Phillips

A comparison of auxiliary ventilation systems and their predicted operational performances <i>H W Wu and A D S Gillies</i>	207
---	-----

Heat and refrigeration

The use of mid-panel ventilation shafts to improve positional cooling efficiency in a Bowen Basin longwall mine – a case study <i>B Belle, D Brouwer and P Wild</i>	217
Accurately estimating heat load from conveyed rock <i>M A Tuck</i>	225
Heat load assessment and mine cooling strategies for a longwall coalmine <i>L van den Berg and M Olsen</i>	231

Mine ventilation

Application of modelling to improve ventilation and gas management in a single-entry longwall panel <i>D J Black</i>	239
Fan specification and tender adjudication for mine ventilation engineers with particular reference to turnkey projects <i>D J Brake</i>	245
Ventilation rules of thumb – friend or foe? Focusing on design upcast air velocities for shafts and raise bores <i>A S Derrington</i>	253
Safety impact of increased shaft ventilation on rope guided conveyances <i>M E Greenway, S R Grobler and R S Hamilton</i>	261
The history of mine ventilation in the United Kingdom <i>J R Leeming</i>	271
A review of ventilation and gas management in underground mines <i>B Robertson and A Self</i>	277
Operation of deep mill level zone mixed flow fans after the first fan upgrade – a parallel fans case study <i>R Sani, A Sianturi and K Lownie</i>	285
Inertisation of coal augering holes <i>M Watkinson and B Leisemann</i>	293

Ventilation management

Australian longwall ventilation systems <i>M Webber, B Belle and J Rowland</i>	301
A review of the strategy and gas monitoring results obtained during the use of Queensland Mines Rescue Service GAG unit at Crinum North mine <i>E Westthorp</i>	309
Author index	319
