

# 13TH AUSIMM UNDERGROUND OPERATORS' CONFERENCE 2017 CONTENTS

## Keynote papers

---

The mining worker of the future – the impact of technology on people and their concepts of work and gender <i>L Abrahamsson</i>	3
Australian contract mining – an operator's perspective of the future <i>M Adams and J Luxford</i>	5
Revolving doors <i>P Rouse</i>	7

## Blasting technology

---

Improving calibration of flow models against SLC marker trials by linking blasting effects to particle mobility <i>A D Campbell and G R Power</i>	11
Blasting related indices as the key to underground blasting improvements in a challenging rock mass <i>J Jackson and E Sellers</i>	23
The evolution of production blasts at Ernest Henry Mine <i>C te Kloot and Z Liu</i>	33
Improving safety through technology – Orica wireless electronic blasting system trials at Ernest Henry Mine <i>C te Kloot, Z Liu, T Purvis, S Thomson, M Lovitt and T Nguyen</i>	39

## Contracting and operating personnel

---

Innovations in underground hard rock operator efficiency – through simulation-based training technologies and processes <i>G K Karadjian, J A de la Torre and I R Cerna</i>	53
Innovation in mining – a contractor's role <i>D Kilkenny</i>	59

## Geotech

---

Improving the prediction of stope hanging wall dilution – a critical factor to the success of Dugald River <i>R Hassell, R de Vries, J Player and J F Carswell</i>	71
Development and implementation of a long tendon bolting system utilising resin grouting technology <i>D Pateman and T Sprague</i>	79
Optimisation of cemented rock fill strength for open stope support <i>H Saw, R de Vries, J Player, R Hassell and E Villaescusa</i>	85

## Human resource issues and innovations

---

Mining automation human-systems integration – CMOC-Northparkes case study <i>R Burgess-Limerick, T Horberry, L Steiner and J Cronin</i>	93
--------------------------------------------------------------------------------------------------------------------------------------------	----

Attractive workplaces in future underground mining <i>J Johansson and B Johansson</i>	<b>99</b>
Technology change in underground mining – things to consider <i>A G L Pratt</i>	<b>103</b>

## **Innovative ideas**

---

Increasing stope recovery in an underground gold mine by using effective analysis, corrective action and employee engagement processes <i>A Heberle, C Freeman and R F Cota</i>	<b>117</b>
Modern mining – why bandwidth matters <i>D Kent</i>	<b>123</b>
Digital imaging provides valuable insights into underground development mining <i>P Klaric, N Swart and S Barnes</i>	<b>129</b>

## **Occupational health and safety**

---

Fatigue risk in your operations – real or rubbish? It actually depends ... <i>B Haskins and T Dawson</i>	<b>137</b>
Learnings from review of drawpoint management across New South Wales mines <i>X Hill</i>	<b>143</b>
Risk assessment tool for mines using diesel-powered mobile equipment <i>O Jones, A W Musk, A Reid and C Davis</i>	<b>151</b>
Eight days entrapped – PT Nusa Halmahera Mineral’s rescue of a trapped miner <i>K Kosmara, A Hilli and J Steyn</i>	<b>155</b>
Emerging trends in injuries in the underground metalliferous sector – an analysis of Queensland data 2006–2016 <i>N LaBranche</i>	<b>161</b>

## **Overseas projects and coal**

---

The development of the Yaramoko gold project in Burkina Faso, West Africa <i>B Cope and Y Churi</i>	<b>173</b>
Inflows into longwall mines from inundated overlying workings <i>G Klenowski and S Winter</i>	<b>183</b>
Hot water management at PT Nusa Halmahera Minerals’ Toguraci Mine <i>R Lawolo, J Isles, J Evert, A Valenza and S King</i>	<b>191</b>
Rock fill consolidation for the extraction of sill pillar stopes at Toguraci gold mine <i>A Proudman, J Isles, R Lawolo and G Forster</i>	<b>199</b>

## **Productivity planning and costs**

---

Telepresence – the application of remote control and automation technologies for increased safety and productivity <i>J Cronin</i>	<b>213</b>
Productivity improvement through collaborative shift planning and tracking <i>E Deucker and A White</i>	<b>225</b>

How a frontline planning and commitment system improves trust, commitment and results in operations <i>P Moynagh and G Britton</i>	<b>235</b>
Towards an understanding of production costs at Australia's underground gold mines <i>S Ulrich, A Trench and S Hagemann</i>	<b>241</b>

## **Reserves and production**

---

A simple and accurate method for Ore Reserve estimation and Mineral Resource depletion in caving mines <i>A D Campbell</i>	<b>253</b>
Dingo – an optimisation tool to solve complex short interval control at Telfer underground mine <i>S Graskoski</i>	<b>261</b>
The use of 3D laser scanning for deformation monitoring in underground mines <i>E Jones and D Beck</i>	<b>267</b>
Integrated drawbell and undercut scheduling using a computational tool at the Grasberg block cave mine <i>D Villa, C A Brannon, C A Dipas and H A Vega</i>	<b>271</b>

## **Safety innovation**

---

Productivity and safety improvements supported by MST's ImPact System at Glencore's Mount Isa Copper Operations <i>J Bullock, D Kent and M Wilkinson</i>	<b>279</b>
JumboGuard – automatic boom isolation system <i>M Hill and J Dwyer</i>	<b>287</b>
Mt Wright – managing unique risks <i>S Long, D Carnovale and L Louwrens</i>	<b>295</b>
Long hole plug – addressing the hazard of bogged rods in 'upholes' <i>S Thomas, G Noonan and M Limbert</i>	<b>305</b>

## **Vertical development**

---

Vertical and inclined raise bore performance at Dugald River mine <i>J F Carswell, G Reitsema and M Lee</i>	<b>313</b>
Shaft construction at the Gold Fields Wallaby mine <i>R A Murrell and J Graaf</i>	<b>321</b>
Improving the performance of blind uphole rises at Ernest Henry Mine – a case study <i>T Purvis and Z Liu</i>	<b>335</b>
The CSA ventilation upgrade – geotechnical challenges and learnings <i>D Sidea and T M Brettell</i>	<b>341</b>
Author Index	<b>353</b>
